

WHO WE ARE

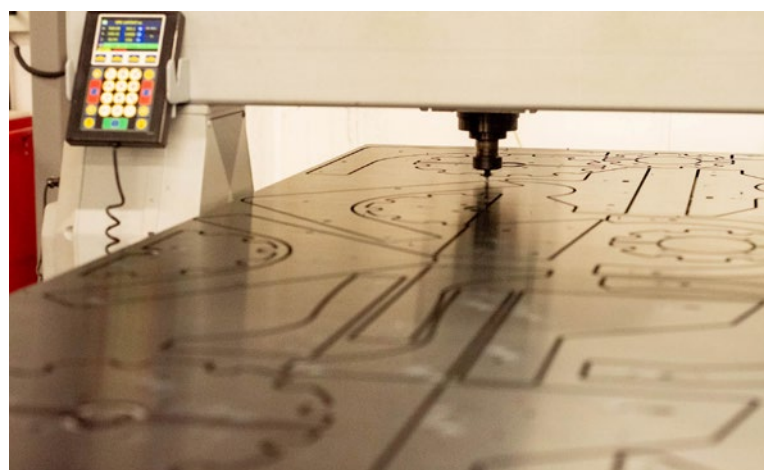

Our “One Stop Shop” approach enables machinery manufacturers to procure their machined parts, both plastic & metal, together with their conveyor components from a single UK source, simplifying ordering and bringing savings in both cost and time.

With our machining lead-times rarely exceeding 2 weeks, and the largest UK stock of conveyor components (chains, belts, sprockets, bearings, wear strips...) builds can start in record time to meet even the most demanding build schedules.

Whatever the environment or application of your equipment we have materials and conveyor components to suit....run dry applications, high wear, chemically resistant, high temperature, abrasion resistant, anti-static...

Established in 1991, and always specialising in these industries, we have grown to where we are today through customer service, reliability, competitive pricing and a dedication to working with each customer individually to meet their own requirements, thereby building long term relationships providing solid foundations to us both.

Priding ourselves on same day quotes so we ensure that all projects can get off the ground quickly, as well as our personal attention to those last minute build requirements that always seem to come up just before a customer FAT test, or emergency breakdowns, we ensure we provide the very best service with every enquiry and every order to every customer.

“ONE STOP SHOP”

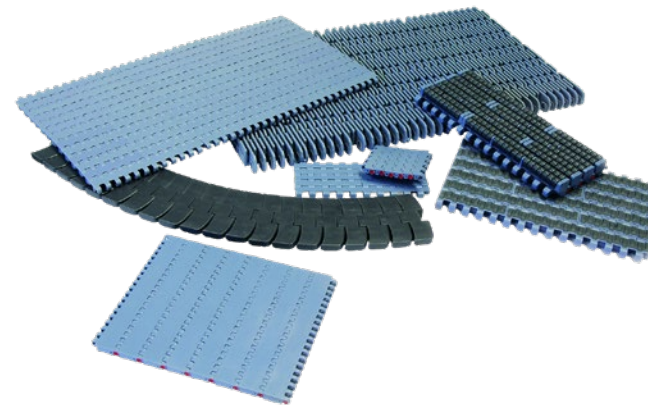

*Solution to the UK Conveyor, Packaging,
Bottling & Food Processing Markets*

CONVEYOR COMPONENT SUPPLY

We are proud to be the largest UK stockist of conveyor components, and UK Preferred Partner to **Movex**. One of the most trusted, reliable and innovative manufacturers of conveyor chains and belts to suit every application, with a full range of components developed and tested to ensure the very best quality in the market. By using **Movex** you enhance the value of your equipment with premium industry products, without the premium prices, and with readily available spares from us, here at Thetford.

Innovations such as their MX & PFX materials allow for dry running, saving considerable running costs as well as a significant environmental advantage, whilst their BluLub materials offer a much improved wear resistance against standard PE1000 for particular high wear applications, whilst others such as their Ultimate Top System (UTS) allow you to run dry with the container stability benefits of Flat Top surface combined with the cleanability of Flush Grid.

With a single production plant in Bergamo, logistics are simplified & lead-times are very competitive, with large stocks supporting demand rather than manufacture to order. Despite this, we have invested heavily to create the largest UK stock of conveyor components, to ensure we can support our “One Stop Shop” solution, as well as to ensure we provide support to your after sales market for breakdowns, planned maintenance etc.

Our sales team can guide you to the parts you require, cross-reference against another manufacturers part number and call upon our EU engineers for support with engineering advice and solutions. If one part is not in stock we can suggest alternatives or work arounds, such as we can modify pilot bore sprockets to create bore size as required.

MACHINING

With constant investment in the latest CNC machinery, we have expanded year on year since our inception to cover almost every requirement from our customers.

CNC Routers

- With 7 machines capable of machining up to 3m x 2m sheets of material, we have the capacity to machine the largest of parts, as well as high volumes. Machining change parts, swan neck conveyor sides, chain tracks, wear strips, guarding panels....you name it, we've machined it for sure, as one of the largest machinists of plastic sheet in the UK.

CNC Milling & Turning

- Machining both metal & plastic we have built the capacity to support machine builders with all their bespoke components. CNC lathes with the capacity to pass 100mm bar through the chuck, allows us to machine batch work of large diameter parts efficiently, together with 4th axis flexibility and integrated milling for reduced set up times and cost. Our CNC mills also cover from small batch work to the most complex 4th axis machining. We are also one of the very few UK companies able to both model and manufacture Feed Scrolls for rotary filling and de-nesting equipment.

Spindle Moulding

- A quicker & more efficient way to radius or angle edges of straight parts such as nose bars, wear strips and side guides.

Planing

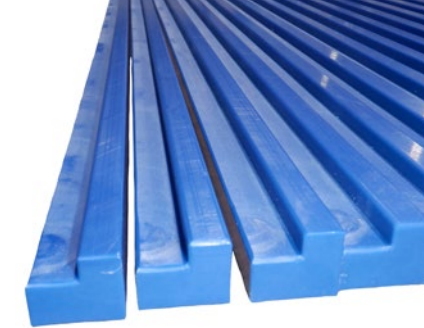

- With a large stock of sheet plastic kept inhouse, we are able to machine without any delivery delays. Where non standard thicknesses are required we can plane up to 610mm wide material with pin point accuracy, and a super smooth finish down to 4mm, ensuring both the quality of the surface finish as well as speeding up machining time.

Line Bending

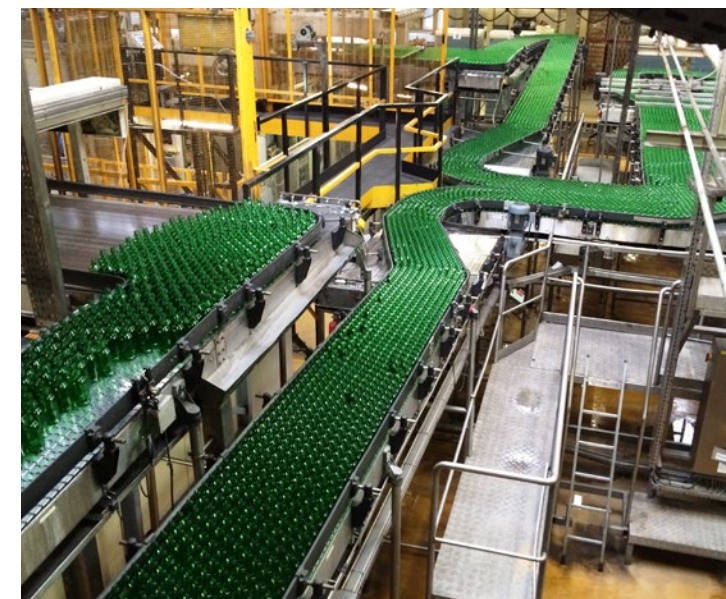

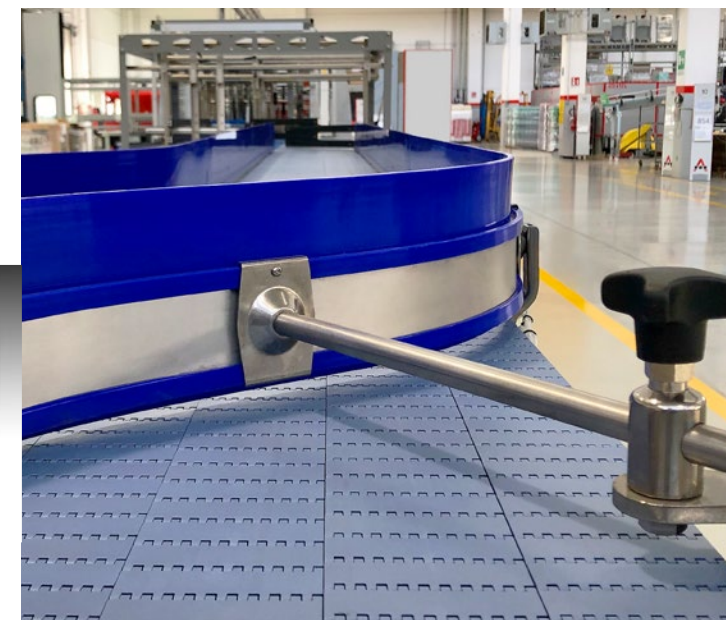

- An important component of any equipment is the guarding panels that surround it, as well as in many applications the infeed / outfeed conveyor tunnels over the conveyors. With our ability to machine up to 3m x 2m panels, and to fold up to 3mtrs in length, we have you covered from the start to the end of your build.

Flame Polishing

- PETG / Polycarbonate have the stronger impact resistance for guarding, but in some instances cast acrylic is required, which we can flame polish the machined faces to give the same shiny, transparent finish all over.

For all your machine guarding

SL ADDING VALUE TO YOUR BUSINESS

- “One Stop Shop” – CNC machining of most plastic & metal components required in the conveyor, food processing and packaging industries since 1991, largest UK stockists of conveyor components (UK Preferred Partner to **Movex**)
- Reduced Costs** – Competitive prices, single deliveries, reduced administration
- Ensures you can meet your customers tight deadlines** – Quick response (same day quotations), short lead-times (rarely over 2 weeks and ability to work to even shorter when required), UK stock of chains, belts, sprockets, bearings & all other conveyor build components
- Long-Term Support** – Committed to building long-term relationships through service, quality, adding value to your supply chain and listening to your feedback..... many customers still dealing with us since 1991.

OUR TEAM ARE READY TO SUPPORT YOU:

- Technical advice on choice of materials
- Guidance on most cost effective designs to maximize material usage and reduce machining costs
- Technical support on conveyor components from choice of material and alternative solutions, to cross referencing existing parts so as to use Movex generic equivalents that we can support through our UK stock.
