Automation

driving the logistics industry

Automation is the game-changer for the logistics industry; improved efficiencies, reduced costs and a significant boost to revenues by creating new value-added opportunities.

The challenge

The challenge for any company looking to future-proof its business through automation is to find a partner who understands the company vision and has the technical capability to design, build and deliver a solution on time and within budget; preferably without disrupting existing production schedules. CKF is a leading UK integrator of automated solutions, providing high speed robotic pick, place and palletising systems for the warehouse and logistics industry. CKF utilises the latest robotic and vision applications to enable businesses of all sizes to increase efficiencies by improving productivity and reducing costs.

As the volume of e-commerce orders increases, so does consumer demand for quicker delivery times and greater choice. Offering more choice may lead to revenue growth but it also increases the complexity in order fulfilment and back-end costs. Similarly, the drive to ensure that warehouses are more tightly integrated with the manufacturing processes and distribution networks must be expertly handled if the potential benefits are to be fully realised.

Our approach

At CKF Systems we recognise the importance of working in partnership with our clients to create solutions that deliver across a range of criteria. From increasing the flexibility of the operation to improving stock control, reducing waste and speeding up processes that offer delivery slots in less time and with greater certainty. Automated systems, vision applications and collaborative robots are the key to a 'smarter' and more successful operation.
They also enable a company to create additional value-added services to attract new business, strengthen existing customer relationships and grow revenues.

“ Automation is the game-changer for the logistics industry; improved efficiencies, reduced costs and a significant boost to revenues by creating new value-added opportunities. ”
